

Letter of recommendation

Date of Issue: **03.02.2025**

Subject: Letter of recommendation

From: Linn Möller, Operativ miljöingenjör, NSR AB

To: ReSource Sverige AB

Eng

It is with great satisfaction that I write this letter of recommendation for ReSource. During our collaboration as Operational environmental engineer at Filborna landfill site within landfill gas mapping and greenhouse gas emissions quantification project, I had the opportunity to witness their commitment to precision and thoroughness in every task they undertake along with their integrity, professionalism, and remarkable teamwork attitude. Detection and quantification of unknown landfill gas sources is no easy task as it involves not only deep theoretical knowledge of the type of environmental processes occurring at the landfill, but also practical experience on where certain practices might originate potential emissions. I appreciated their commitment to the delivery of a qualitative and quantitative written report which gave us further insights on our day-to-day landfill gas and biogas production operation. I can recommend their team to other colleagues in the Swedish waste management and biogas industry who need to investigate potential emissions effectively.

Swe

Jag kan varmt rekommendera ReSource. Under vårt samarbete vid Filborna deponi inom ett projekt för kartläggning och kvantifiering av ytutsläpp visade de stor noggrannhet, professionalism och god samarbetsförmåga. Att identifiera och mäta okända diffusa utsläpp kräver både teoretisk kunskap och praktisk erfarenhet. ReSource bidrog med värdefull expertis och levererade en tydlig rapport som gav oss insikter för att förbättra vår deponigas- och biogasproduktion. Jag rekommenderar dem gärna till andra inom svensk avfallshantering och biogasindustri som behöver stöd i utsläppsutredningar.

I approve the use of NSR company logo along with ReSource logo and publication on the above text on ReSource web page.

Best Regards,

Linn Möller

Operativ miljöingengör
